

How can you benefit from properly handling organic waste?

Applying any change requires some effort. And, while knowing that you are doing the right thing for the environment should ideally be enough, you may still need some additional motivation to start properly handling organic waste sooner rather than later. So, what's in it for you?

Would you like to live on a healthier planet? By properly managing organic waste, you get to contribute to lower landfills and greenhouse gas emissions, healthier soil, and even healthier food. Also, you get to be a contributor to the enhancement of the circular economy. And, all of this contributes to a healthier planet. All-in-all, it is always better to be a part of a solution than a problem.

You can also save a noticeable amount of money otherwise spent on organic waste bags. When using the right bins, the ones that can easily be washed even in a dishwasher, you do not need to use any bags. Moreover, when using bokashi composting, you reduce organic waste volume. So, if you live in an area where you pay as you throw, this also positively reflects in your wallet.

Moreover, using the bokashi method, which uses airtight indoor composters, you also avoid several inconveniences, including flies, rotten smell, and dealing with municipal containers less frequently.

Nonetheless, if you take the required simple steps that we will cover in the next phase of the #bokashiloop, the PROCESS, you can benefit even further in your day-to-day life. For instance, in case you have your own plants or garden, you get to produce your own compost and thus save money on that. You also get to produce your own fertilizer substitute, which can be used also as a drain cleaner. As such, you cover several aspects just by properly managing your organic waste.

Hopefully, you now see that properly collecting organic waste is very easy and something you are eager to start practicing daily. This also means you are ready for the next phase of the Bokashi academy.
